

The graph displays the performance of various methods as a function of separation distance. The x-axis, labeled 'separation, bp', is on a logarithmic scale with major ticks at 10^6 and 10^7 . The y-axis represents a normalized metric from 0 to 1.0. Several methods are plotted as lines of different colors. Most methods show a general decrease in the metric as separation increases, with some exhibiting local maxima or minima. Shaded gray vertical bands are present at approximately 10^6 to 2×10^6 bp, 4×10^6 to 8×10^6 bp, 1.5×10^7 to 3×10^7 bp, and 6×10^7 to 1.2×10^8 bp.
